DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 5,971,856 to Aoyama et al. ("Aoyama") in view of JP Publication No. 10-049416 to Whiting et al. ("Whiting"). Aoyama teaches saving player game data as game progress advances, in a memory card, allowing a player to return to saved game location (1:12-28). Thus the saved game data on a memory card would be read into a main memory when the player decides to access the saved game data. Aoyama does not teach the specific requirements of comparing new data to be saved with existing stored game data. Whiting teaches a common technique used when saving computer data. This technique is taught as comparing existing data to new data to be saved, where only new data different from the old, stored data will be copied (Claim 1). This technique is employed to reduce the time needed to save data, where one would be motivated use the data writing technique taught by Whiting to reduce data writing time. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Aoyama to use the data writing technique taught by Whiting to increase data writing speed and efficiency.

Aoyama in view of Whiting teaches the limitation as discussed above, but also do not specifically detail the data type saved to a memory card as "translation dictionary data".

However, Aoyama in view of Whiting teaches saving game state data, which would encompass

Art Unit: 3713

all necessary data used by game to define game state. Additionally, absence a showing of criticality, the translation dictionary data is considered analogous game state data taught by Aoyama in view of Whiting. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to save translation dictionary data in the memory card to insure game state recovery.

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Pat. No. 6,009,458 to Hawkins et al. teaches saving game data state and game attributes earned and developed by a player.

US Pat. No. 6,527,641 to Sinclair et al. teaches a network game system that saves game state, allowing a player to resume a game.

Conclusion

In regard to Applicant's Information Disclosure Statement, Examiner acknowledges receipt of form PTO-1449. However, the submission did not garner a full review as the disclosed documents do not appear to have been submitted with PTO-1449. Resubmission of the missing documents will be necessary for full consideration.
